

IT PROJECT DEVELOPMENT PROPOSAL

1. Prospect Client

The proposed system is intended for implementation in small to medium-sized enterprises, organizations, or institutions that require automation and efficient management of their payroll operations. The client may belong to sectors such as private businesses, government offices, educational institutions, or non-profit organizations, where accurate employee salary computation, attendance tracking, and deduction management are essential for smooth financial operations.

2. Project Title

"Payroll Information System with Attendance Management"

3. Project Description

This project aims to develop a comprehensive computerized Payroll Information System designed to streamline payroll processes, improve accuracy in salary computation, and enhance operational efficiency. The system automates the calculation of employee salaries, government-mandated deductions (SSS, PhilHealth, Pag-IBIG), and withholding taxes, eliminating manual computation errors and reducing administrative workload.

The system integrates employee management, attendance tracking, payroll processing, and report generation into a unified platform. It provides role-based access control to ensure data security and confidentiality. The user-friendly web-based interface allows administrators, payroll officers, and employees to access relevant features based on their roles, making payroll management transparent and efficient.

4. Objectives

General Objective:

To develop a comprehensive Payroll Information System that improves operational efficiency, ensures accurate salary computation, and provides secure access to payroll information for all stakeholders.

Specific Objectives:

1. To design a user-friendly web-based interface for easy navigation and operation by users with varying technical skills.
2. To automate payroll computation including basic salary, overtime, allowances, and government-mandated deductions.

3. To implement attendance tracking and integration with payroll processing for accurate salary calculation.
4. To provide real-time access to payroll data, payslips, and reports for administrators and employees.
5. To ensure data security through role-based access control and authentication mechanisms.
6. To generate comprehensive reports including payroll summaries, department analyses, and employee salary histories.
7. To maintain data integrity through automated backup and recovery features.

5. Possible Users

The system will cater to different types of users depending on their roles and responsibilities within the institution:

- ✓ **Administrator** - System owner with full access to all features and configurations.
- ✓ **Staff /Payroll Officer** - Personnel responsible for processing payroll and managing employee records
- ✓ **Employee** - End users who can view their personal payroll information and payslips

6. Features Accessible Per User

Administrator:

- ✓ Full CRUD (Create, Read, Update, Delete) operations on all employee records
- ✓ Manage departments (add, edit, delete, view)
- ✓ Create, process, and manage payrolls; bulk payroll generation; add deductions and adjustments
- ✓ Full attendance record management; bulk attendance entry; view attendance reports
- ✓ Configure SSS, PhilHealth, Pag-IBIG contribution tables and tax brackets
- ✓ Access all reports: Payroll Summary, Employee Salary, Department Summary, Payroll History
- ✓ Manage user accounts and access permissions
- ✓ Access comprehensive system documentation and user guide

Staff / Inventory Manager:

- ✓ Full CRUD operations on all employee records
- ✓ View departments only
- ✓ Create, process, and manage payrolls; bulk payroll generation; add deductions and adjustments
- ✓ Full attendance record management; bulk attendance entry; view attendance reports
- ✓ View deduction settings only
- ✓ Access all reports: Payroll Summary, Employee Salary, Department Summary, Payroll History
- ✓ Access comprehensive system documentation and user guide

Employee / End User:

- ✓ View personal dashboard with employee information summary
- ✓ Access and download personal payslips
- ✓ View payroll history and payment records
- ✓ View attendance summary
- ✓ Access employee-specific help and FAQ documentation

7. Technology Stack

The system will be developed using modern web technologies and frameworks:

- Backend:

- ✓ **Framework:** Laravel 11 (PHP)
- ✓ **Language:** PHP 8.x
- ✓ **Database:** MySQL/MariaDB
- ✓ **Authentication:** Laravel Breeze (Blade-based)

- Frontend:

- ✓ **Templating Engine:** Blade
- ✓ **CSS Framework:** CSS3
- ✓ **UI Components:** Bootstrap Icons, Bootstrap 5

- Development Tools:

- ✓ **Version Control:** Git
- ✓ **Package Manager:** Composer, NPM
- ✓ **Server:** XAMPP/Apache

8. System Modules

8.1 Dashboard Module

- Role-based dashboards (Admin, Staff, Employee)
- Quick statistics and overview widgets
- Recent activity and notifications

8.2 Employee Management Module

- Employee registration with personal and employment details
- Employee profile management
- Department assignment
- Salary type configuration (monthly, daily, hourly)
- Employment status tracking

8.3 Department Management Module

- Department creation and configuration
- Department code and name management
- Employee count per department

8.4 Attendance Management Module

- Daily attendance recording
- Bulk attendance entry
- Attendance reports by date range
- Integration with payroll processing

8.5 Payroll Processing Module

- Individual and bulk payroll creation
- Automatic calculation of gross pay, deductions, and net pay
- SSS, PhilHealth, Pag-IBIG, and tax computation
- Payroll status tracking (draft, processed, paid)
- Payslip generation and printing
- Payroll item adjustments (allowances, bonuses, penalties)

8.6 Deduction Settings Module

- SSS contribution table management

- PhilHealth premium configuration
- Pag-IBIG fund settings
- Withholding tax bracket configuration

8.7 Reports Module

- Payroll Summary Report (by date range with statistics)
- Employee Salary Report (filterable by department and salary type)
- Department Summary Report (employee count, total and average salaries)
- Individual Payroll History Report

8.8 Help and Documentation Module

- Comprehensive user guide and FAQ
- Role-specific help documentation
- System overview and quick tips
- Contact support information

9. Security Features

- Role-based access control (RBAC) with three user roles: Admin, Staff, Employee
- Secure authentication with hashed passwords using Bcrypt
- Session management and protection
- Data validation and sanitization
- Protection against SQL injection and XSS attacks through Laravel's Eloquent ORM and Blade templating

10. Additional Notes

The system will be developed following the Agile methodology with iterative development and continuous testing. The development process will include requirement analysis, system design, implementation, testing, deployment, and maintenance phases.

The system is designed to comply with Philippine government regulations regarding employee benefits and taxation (SSS, PhilHealth, Pag-IBIG, BIR withholding tax). Regular updates will be provided to accommodate changes in government contribution rates and tax brackets.

Training and documentation will be provided to ensure smooth adoption by end-users. Technical support will be available during and after the deployment phase.
